About Apollo

Apollo Commercial is one of Australia's leading manufacturers of commercial roofing products and systems.

Apollo is proud to partner with roofing and construction businesses across Queensland, New South Wales and the ACT.

We have a wealth of experience matching our insulated panel products to industrial solutions.

Our roof panels are designed, engineered and manufactured in Australia, to provide comfort and protection from Australia's harsh environmental conditions.

We will work with you to ensure the project encompasses your design requirements and scope of works. Apollo ensures the requirements for your project are delivered on time efficiently and safely, adhering to Australian standards and industry codes.

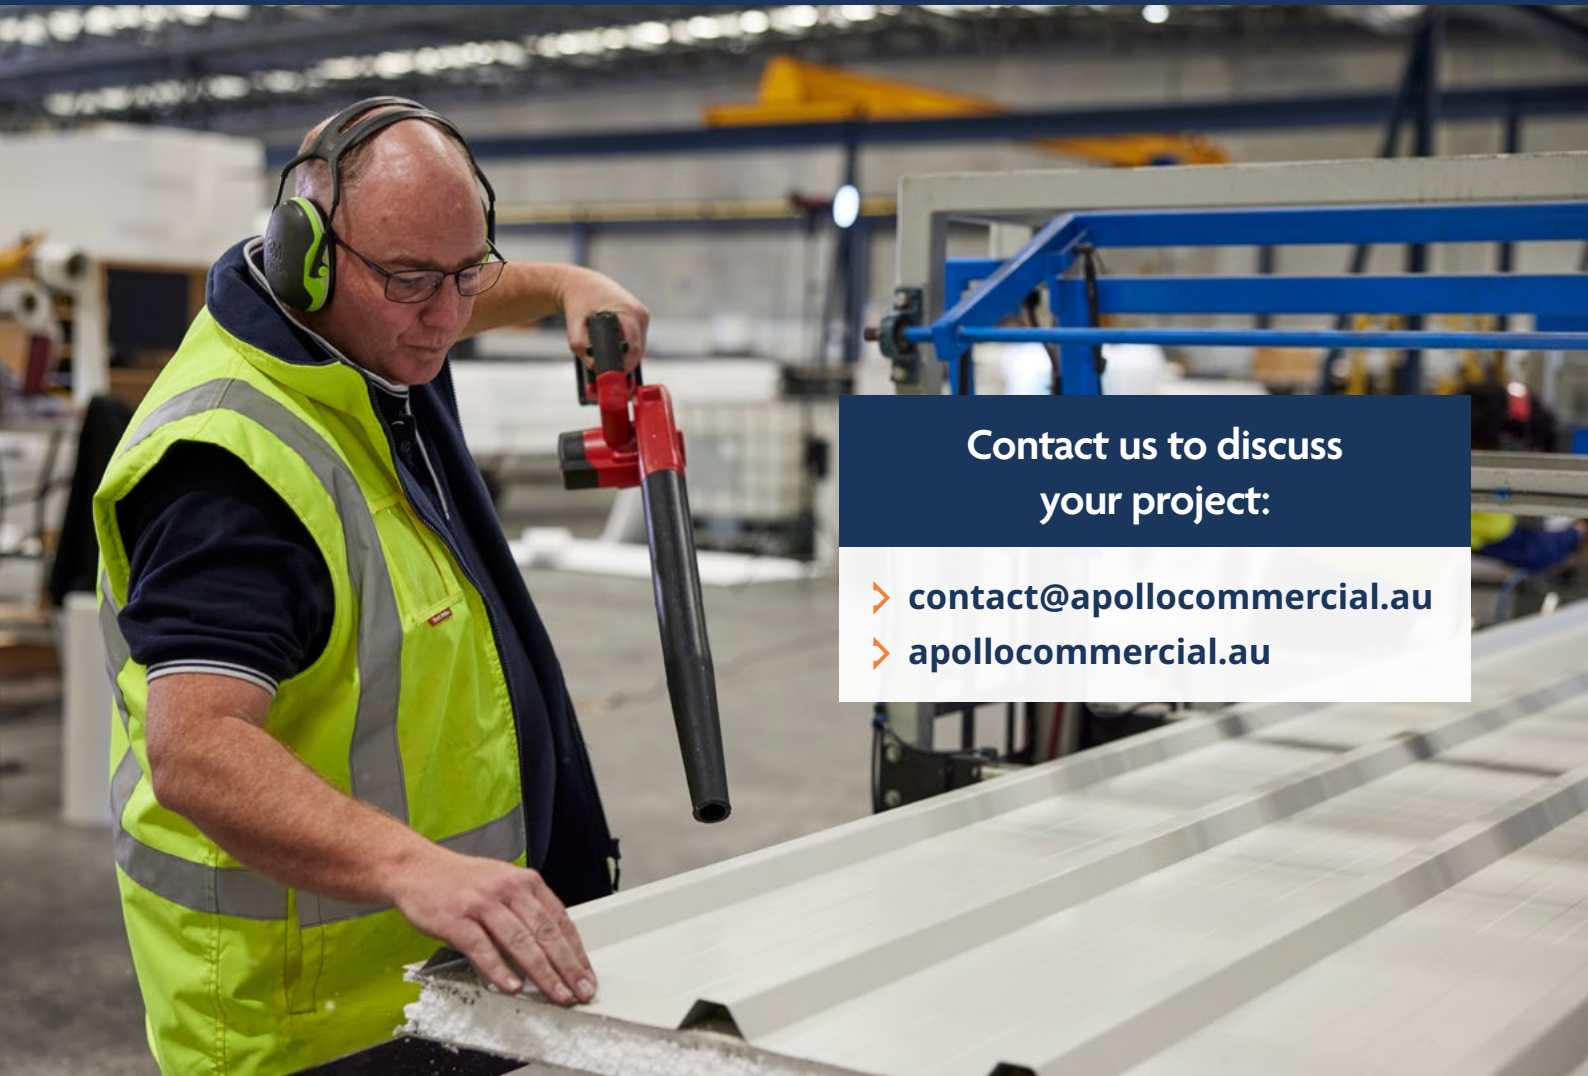

Operating since 1995, our experience and manufacturing capability spans the commercial, industrial, government and mining sectors. We also have extensive remote site experience.

Drawing on our diverse roofing and manufacturing expertise, we design and supply an impressive range of market leading solutions and products, perfect for your commercial roofing projects.

Commercial Roofing Solutions

We understand that commercial roofing projects are unique and often require extra care and due diligence, with processes to be adhered to from design through to delivery.

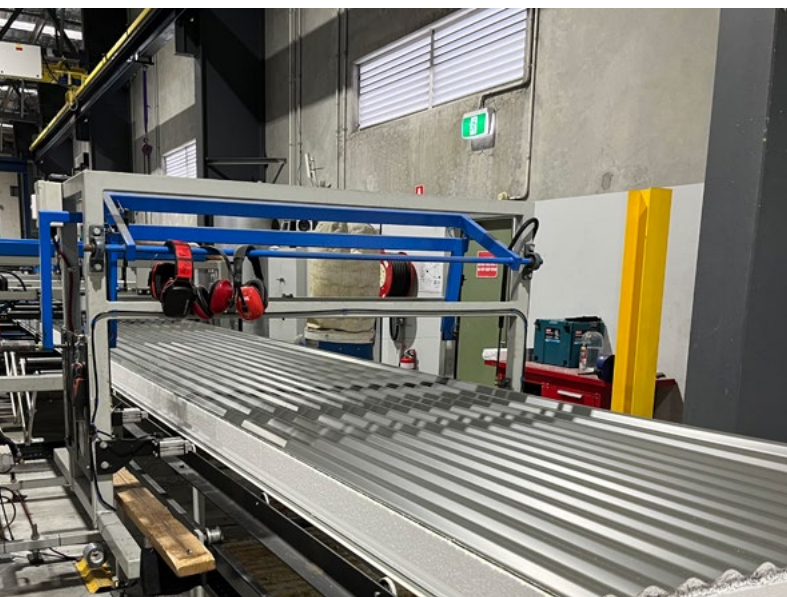

We provide:

- Commercial and Residential Roofing
- Shade Structures
- Shelters
- Insulated Roofing
- Single-Skin Roofing
- Walk-ways
- Breezeways
- Entrance and Exit Covers
- Carports and undercover parking facilities
- Decks
- Privacy Louvres and Slats

Our clients include:

- Sporting clubs
- Shopping centres
- Hotels
- Restaurants
- Schools and kindergartens
- Colleges and universities
- Mining
- Parks
- Retirement villages
- Council and government
- Tiny homes, demountable buildings and granny flats

Apollo® products are designed and engineered to withstand Australia's harshest conditions.

Offering year-round protection from the rain and sun, Apollo Commercial's high-quality products are engineered for lasting quality and to meet building standards.

Improved Efficiency

All panels are custom made to order to suit your project from 2M to 12.5M in length.

A complete roof and ceiling in one, with large spanning capabilities resulting in considerably less supporting framework, simplifying the installation process and reducing labour and material costs.

The durable coating and easy to clean finish, is virtually maintenance free.

Easy to integrate accessories with:

- A conduit groove in every panel for electrical cable installation.
- Compatible low voltage LED downlights kits (that builders can install). Requires a licensed electrician for power connection.
- Integrated natural light panels available for all panel sizes.

Apollo Warranty

The Apollo paint coat finish comes with a 15-year manufacturer's warranty. Liaise directly with the manufacturer for complete peace of mind.

High Thermal Rating

Apollo Insulated Panel achieves R-value ratings up to R4.58. The Insulated Panels will increase the comfort levels in all applications, plus reduce the heating and cooling requirements.

Superior Spans

Less unsightly under structure and saves on materials and labour costs. Spans achievable up to 10 meters (200mm panel) and typically up to 45% greater than the typical market 0.42 single skin roof options.

Superior Strength

Apollo Insulated Panel is lightweight and strong over large spans. The product is strong enough to walk on, plus support solar panels and other accessories. Refer to the relevant data sheet for clarification.

Marine Environment Solutions

We offer insulated roofing options for harsh marine environments with the use of UniCote Coastal™.

For projects close to the ocean or other corrosive influences including pools we recommend UniCote® Coastal steel for extra protection.

UniCote® Coastal is tested in Australian conditions and takes the standard aluminum/zinc alloy-coated steel substrate to the next level with the addition of magnesium.

This enables the zinc to 'flow', which seals the cut edges preventing exposure to premature corrosion, making it ideal for harsher environments near the coast or waterways.

Project specific warranties are available after consultation with our industry experts for extra peace of mind.

Apollo's Marine Grade Solution

- UniCote® Coastal is available in the following colours:

Unicote® Coastal Top-side:

Under-side:

Off White
(Surfmist®)

Monolith
(Monument®)

Slate Grey
(Woodland Grey®)

Off White
(Surfmist®)

- Project quantities will require Coil to be "pre ordered". Other colours are available with Minimum Order quantities applicable.
- Beams - Available in Off-White (Surfmist) colour.
- Aluminum post for anti-corrosion properties.
- Flashings and gutters.

Apollo Commercial advantages

Manufactured in Australia

Designed, engineered, and manufactured in Australia.

Specialising in the supply of commercial roofing solutions including insulated and single skin roofing.

Ability to manufacture to custom lengths.

Communication

Deal directly with your local manufacturer in Queensland and New South Wales.

Apollo provides details on every aspect of our panel solutions to suit the needs of your individual project.

High level of customer care, service and support for every project.

Engineering

Our experienced team has a wealth of knowledge and can provide guidance of suitable solutions and our engineering.

If you need assistance, our BDMs are always just a call away.

Our dedicated team will promptly provide pricing on your Bill of Materials, across a wide range of projects.

Design Versatility

Apollo products are suited for a broad range of traditional and modern roofing design applications.

Apollo Commercial panels offer technical solutions to the functional requirements of industry. On request we can assist in the design process of your project, giving advice to make your project as stylish, cost efficient and timely as possible.

Complete System / Supply

Apollo really is your one-stop-shop. We deliver everything needed to construct your project to your business or direct to site, right down to every nut and bolt. No need to source products from other suppliers.

We can package product to suit specific site needs, and pack securely for long-haul transport. You have the option to arrange your own transport if preferred.

Compliance

Apollo Commercial panels undergo rigorous testing to meet the requirements of Australian Standards, Insurers, and relevant Building Legislation to provide our customers with the best standards compliant products available.

Roofing products are engineered to suit all Australian terrain category regions from W28(N1) to Cyclonic (N5 & C4).

BAL and Fire Certifications

Apollo Insulated is suitable for use as roof covering for Class 1 and 10, buildings to be constructed in designated bushfire prone areas up to BAL 40.

The Insulated Roof Panels are manufactured with fire retardant expanded polystyrene (EPS-FR) core and comply with the requirements of BCA Clause 1.10 (a)(ii) as well as BCA Specification C1.10 Clause 7 Table 4.

Our Single Skin Roofing products have been tested and certified as non-combustible, ideal for Flame Zone (FZ) applications.

Cyclone Tested

Apollo Insulated Trimlink profile is cyclone wind load tested and certified up to C4. Apollo panels are tested to NCC/BCA requirements.
